

Date: March XX, 2026

Subject: Title of your statement/proposal

We invite you to share your perspective on what responsible and durable AI governance should look like over the next decade. There is no required format — we welcome independent thinking and diverse viewpoints.

You may consider addressing themes such as:

- **The Direction of AI Governance** — Should AI oversight be national, global, industry-led, state-led, or hybrid?
- **Ethical Foundations** — What principles must remain non-negotiable as AI systems grow in capability and influence? Where do current approaches fall short?
- **Accountability & Liability** — When AI systems cause harm, how should responsibility be structured across developers, deployers, and users?
- **Risk, Memory & Autonomy** — As AI systems develop persistent memory and greater autonomy, what guardrails become essential?
- **Near-Term vs Long-Term Priorities** — What actions are urgent in the next 3–5 years, and what structural shifts are needed over the next decade?

We look forward to your insights.

Warm regards,

Arsalan
